

Aura Framework

Course Overview

BY VIJAY KUMAR

Introduction

What is Lightning Aura Framework?.

The Lightning Aura Framework is a client-side framework developed by Salesforce for building **dynamic** and **responsive** user interfaces within the Salesforce platform. It was one of the key components of Salesforce's Lightning Experience, designed to provide a more modern and interactive user interface for users of Salesforce applications.

In this course I have covered complete syllabus of Salesforce Lightning Web Component framework with real-time project example **step-by-step** for beginner to advanced label.

Where you will be learn **advanced technical** scenarios based on live demo projects **example of Aura Framework** in Salesforce.

It is suitable for developers who have experience with JavaScript and web development, and want to learn how to use the **Aura** framework in Salesforce.

It is **also suitable** for experienced Salesforce developers who want to learn how to use the **Lightning Web Components** framework to build more efficient and scalable user interfaces.

I have **taken care** of who are brand new to start Salesforce Career as a developer and want to **grow their Career** in Salesforce development.

Real time Scenarios

- ✦ How to Create Lightning Component and Application?
- ✦ Example of Interfaces in Aura Component.
- ✦ The Basic structure of Attribute & Expressions in Lightning Component.
- ✦ How to Call a JavaScript function in Lightning Component?
- ✦ How to Communicate from Child to Parent in Aura Component?
- ✦ How to communicate from Parent to Child through aura-method in Lightning Aura Component?
- ✦ How to display a modal popup with a form inside in lightning components?
- ✦ Application Event in Lightning Component.
- ✦ How to get Radio Button Selected Value in Aura Lightning Component?
- ✦ How to display an image from Static Resources in Aura component?
- ✦ How to create custom form validation in Aura Lightning Component?

Real time Scenarios

- ✚ How to fetch list of Opportunity record through Apex Class?
- ✚ How to fetch the Opportunity record based on recordId?
- ✚ How to display related list of record based on recordId of lookup relationship?
- ✚ How to display Parent to Child Record through Nested Query in Aura Component?
- ✚ How to create custom record search functionality in lightning component?
- ✚ How to use wrapper class in Aura Lightning Component?
- ✚ How to Insert record using Apex Controller in Aura Lightning Component?
- ✚ How to get picklist values dynamically in Aura Lightning Component?
- ✚ How to get Checkbox Selected Value in Aura Lightning Component?
- ✚ How to Fetch related list on Account on click button in Lightning Component?
